COMMENT     COMMENT .    Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 137; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

```
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 135; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     prepared and sequenced in Mouse Genome Encyclopedia
                     Project of Genome Exploration Research Group in Riken
                     Genomic Sciences Center and Genome Science Laboratory in
                     RIKEN. Division of Experimental Animal Research in Riken
                     contributed to prepare mouse tissues. 1st strand cDNA was
                     primed with a primer [5'
                     GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was
                     prepared by using trehalose thermo-activated reverse
                     transcriptase and subsequently enriched for full-length by
                     cap-trapper. cDNA went through one round of normalization
                     to Rot = 10.0 and subtraction to Rot = 185.0. Second
                     strand cDNA was prepared with the primer adapter of
                     sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC
                     3']. cDNA was cloned into the XhoI and BamHI sites.
                     Vector: a modified pBluescript KS(+) after bulk excision
                     from Lambda FLC I. Cloning sites, 5' end: SalI; 3' end:
                     BamHI"

```

Genetics, Washington University School of Medicine, 4444 Forest Park Boulevard, St. Louis, MO 63108, USA
COMMENT COMMENT Supported by NIH grant 5U 01 AI43283

Coding sequences below are predicted from manually evaluated computer analysis, using similarity information and the programs; GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and GeneMark; http://opal.biology.gatech.edu/GeneMark/

EC numbers were kindly provided by Junko Yabuzaki and the Kyoto Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/, and Pedro Romero and Peter Karp at EcoCyc; http://ecocyc.PangeaSystems.com/ecocyc/

The analyses of ribosome binding sites and promoter binding sites were kindly provided by Heladia Salgado, Julio Collado-Vides and ReguonDB; http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
```

```
          and products; all new functional assignments courtesy of Monica
          Riley; added promoters, protein binding sites, and repeated
          sequences described in reference 1. The unique numeric identifiers
          beginning with a lowercase 'b' assigned to each gene (protein- or
          RNA-encoding) are now designated as gene synonyms instead of
          labels. This should allow them to be searched for in Entrez as gene
          names.

RESULT 13
D90741
LOCUS D90741 15047 bp DNA linear BCT 25-DEC-2002
DEFINITION Escherichia coli K12 genomic DNA. (23.7 - 24.0 min).
ACCESSION D90741 AB001340
VERSION D90741.1 GI:1651509
KEYWORDS Complete and shotgun sequencing; csgG; csgF; csgE; csgD; csgB; csgA; ycdE; cls; nov; mdoG.
SOURCE Escherichia coli K12
ORGANISM Escherichia coli K12
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Escherichia.
REFERENCE 1
AUTHORS Oshima,T., Aiba,H., Baba,T., Fujita,K., Hayashi,K., Honjo,A., Ikemoto,K., Inada,T., Itoh,T., Kajihara,M., Kanai,K., Kashimoto,K., Kimura,S., Kitagawa,M., Makino,K., Masuda,S., Miki,T., Mizobuchi,K., Mori,H., Motomura,K., Nakamura,Y., Nashimoto,H., Nishio,Y., Saito,N., Sampei,G., Seki,Y., Tagami,H., Takemoto,K., Wada,C., Yamamoto,Y., Yano,M. and Horiuchi,T.
TITLE A 718-kb DNA sequence of the Escherichia coli K-12 genome corresponding to the 12.7-28.0 min region on the linkage map

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 137; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

```
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 135; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Organ: Prostate; Vector: pT7T3 Pac; Site_1: EcoR I; Site_2: Not I; The library was constructed according Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. Denatured RNA was size fractionated on a 1% agarose gel. First strand cDNA synthesis was primed with oligo-dT primer containing a Not I site. Double strand cDNA was size selected according to mRNA size fraction, ligated with EcoR I adaptor, digested with Not I and then cloned directionally into pT7T3 Pac vector. The library tag sequence located between the Not I site and the polyA tail is CCCAC. Tissue was provided by Tim Ratlift."

```

Genetics, Washington University School of Medicine, 4444 Forest Park Boulevard, St. Louis, MO 63108, USA
COMMENT COMMENT Supported by NIH grant 5U 01 AI43283

Coding sequences below are predicted from manually evaluated computer analysis, using similarity information and the programs; GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and GeneMark; http://opal.biology.gatech.edu/GeneMark/

EC numbers were kindly provided by Junko Yabuzaki and the Kyoto Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/, and Pedro Romero and Peter Karp at EcoCyc; http://ecocyc.PangeaSystems.com/ecocyc/

The analyses of ribosome binding sites and promoter binding sites were kindly provided by Heladia Salgado, Julio Collado-Vides and ReguonDB; http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
```

```
          and products; all new functional assignments courtesy of Monica
          Riley; added promoters, protein binding sites, and repeated
          sequences described in reference 1. The unique numeric identifiers
          beginning with a lowercase 'b' assigned to each gene (protein- or
          RNA-encoding) are now designated as gene synonyms instead of
          labels. This should allow them to be searched for in Entrez as gene
          names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

CC   The present invention describes a recombinant agfA gene (I) where a
```

CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response

```
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/clone_lib="NIH_BMAP_M_S4"
/note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; The NIH_BMAP_M_S4 library is a subtracted library of a series, ultimately derived from a mixture of individually tagged normalized libraries from ten regions of the mouse brain (cerebellum, brain stems, olfactory bulbs, hypothalamus, cortex, amygdala, basal ganglia, pineal gland, striatum, hipoccampus) after a series of subtractions to reduce the representation of cDNAs from which ESTs had already been generated. The following serially subtracted libraries were generated in this process: NIH_BMAP_M_S4, NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, NIH_BMAP_M_S3.1, NIH_BMAP_M_S2, NIH_BMAP_M_S1. The subtracted library (NIH_BMAP_M_S4) was constructed as follows: PCRamplified cDNA inserts from NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with a pool of the NIH_BMAP_M_S3.3, NIH_BMAP_M_S3.2, and NIH_BMAP_M_S3.1 libraries in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (LifeTechnologies) to generate the NIH_BMAP_M_S4 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:791-806, 1996)"

            Clones are derived from the Trypanosoma brucei GUTat 10.1 sheared
            DNA library constructed at TIGR. Clones will be available for
            distribution through ATCC. Sheared DNA end sequences search page:
            http://www.tigr.org/tdb/mdb/tbdb/.
            Seq primer: M13-Forward
            Class: shotgun.

COMMENT COMMENT Supported by NIH grant 5U 01 AI43283

Coding sequences below are predicted from manually evaluated computer analysis, using similarity information and the programs; GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and GeneMark; http://opal.biology.gatech.edu/GeneMark/

EC numbers were kindly provided by Junko Yabuzaki and the Kyoto Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/, and Pedro Romero and Peter Karp at EcoCyc; http://ecocyc.PangeaSystems.com/ecocyc/

The analyses of ribosome binding sites and promoter binding sites were kindly provided by Heladia Salgado, Julio Collado-Vides and ReguonDB; http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistries or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response
CC against the inserted epitope, and hybrid fimbriae are easy and
CC inexpensive to purify in large amount. The present sequence is given in
CC the exemplification of the present invention

PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 136; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
```

```
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 136; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the
CC homologous species; (3) directing recombination of a recombinant gene
CC back into the chromosome of the homologous species, replacing the native
CC copy of that gene; and (4) eliciting an immune response in an animal,
CC comprising separating an amino acid polymer comprising a recombinant AgfA
CC protein containing a replacement segment or segments of foreign amino
CC acid sequence or sequences grown on a Salmonella, E. coli or
CC Enterobacteriaceae host cell, from the host cell and introducing the
CC polymer into the animal in conjunction with a carrier or diluent. (I) is
CC useful for the expression of recombinant AgfA protein which is useful for
CC eliciting an immune response in an animal. In a fimbrial presentation
CC system the heterologous antigens are presented in high numbers (up to
CC 500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC immunogenicity and adhesion properties relevant for an efficient live
CC vaccine, the carrier fimbrial subunit proteins are usually strong
CC immunogens, which may be important for directing an immune response

```
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                     /note="Vector: lambda ZAP Express/pBK-CMV; Site_1: EcoR1
                     (5' adaptor); Site_2: XhoI (3' linker primer); The mixed
                     organ cDNA library was generated using the ZAP-cDNA method
                     by Stratagene. First strand cDNA synthesis was primed with
                     a a 50 bp linker primer containing an oligo dT sequence
                     preceeded by a synthetic XhoI site. 5 prime adaptors were
                     used containing an EcoR1 cohesive end. The finished cDNAs
                     were inserted in to the ZAP express vector
                     unidirectionally in the sense orientation with respect to
                     the lacZ promoter of pBK-CMV. An amplified library was
                     prepared from approximately 3 million primary clones in
                     the lambda ZAP Express vector. In vivo excision was then
                     used to generate individual pBK-CMV phagemid clones for
                     EST sequencing."

COMMENT     COMMENT     Supported by NIH grant 5U 01 AI43283

            Coding sequences below are predicted from manually evaluated
            computer analysis, using similarity information and the programs;
            GLIMMER; http://www.tigr.org/softlab/glimmer/glimmer.html and
            GeneMark; http://opal.biology.gatech.edu/GeneMark/

            EC numbers were kindly provided by Junko Yabuzaki and the Kyoto
            Encyclopedia of Genes and Genomes; http://www.genome.ad.jp/kegg/,
            and Pedro Romero and Peter Karp at EcoCyc;
            http://ecocyc.PangeaSystems.com/ecocyc/

            The analyses of ribosome binding sites and promoter binding sites
            were kindly provided by Heladia Salgado, Julio Collado-Vides and
            ReguonDB;
            http://kinich.cifn.unam.mx:8850/db/regulondb_intro.frameset

            This sequence was finished as follows unless otherwise noted: all
            regions were double stranded, sequenced with an alternate
            chemistries or covered by high quality data (i.e., phred quality >=
            30); an attempt was made to resolve all sequencing problems, such
            as compressions and repeats; all regions were covered by sequence
            from more than one m13 subclone.

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
```

and products; all new functional assignments courtesy of Monica Riley; added promoters, protein binding sites, and repeated sequences described in reference 1. The unique numeric identifiers beginning with a lowercase 'b' assigned to each gene (protein- or RNA-encoding) are now designated as gene synonyms instead of labels. This should allow them to be searched for in Entrez as gene names.

```

RESULT 13
D90741
LOCUS D90741 15047 bp DNA linear BCT 25-DEC-2002
DEFINITION Escherichia coli K12 genomic DNA. (23.7 - 24.0 min).
ACCESSION D90741 AB001340
VERSION D90741.1 GI:1651509
KEYWORDS Complete and shotgun sequencing; csgG; csgF; csgE; csgD; csgB; csgA; ycdE; cls; nov; mdoG.
SOURCE Escherichia coli K12
ORGANISM Escherichia coli K12
Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales; Enterobacteriaceae; Escherichia.
REFERENCE 1
AUTHORS Oshima,T., Aiba,H., Baba,T., Fujita,K., Hayashi,K., Honjo,A., Ikemoto,K., Inada,T., Itoh,T., Kajihara,M., Kanai;K., Kashimoto,K., Kimura,S., Kitagawa,M., Makino,K., Masuda,S., Miki,T., Mizobuchi,K., Mori,H., Motomura,K., Nakamura,Y., Nashimoto,H., Nishio,Y., Saito,N., Sampei,G., Seki,Y., Tagami,H., Takemoto,K., Wada,C., Yamamoto,Y., Yano,M. and Horiuchi,T.
TITLE A 718-kb DNA sequence of the Escherichia coli K-12 genome corresponding to the 12.7-28.0 min region on the linkage map
JOURNAL DNA Res. 3 (3), 137-155 (1996)
MEDLINE 97061202
PUBMED 8905232
REFERENCE 2

PT Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT which encodes foreign epitope or antigen, expresses recombinant AgfA
PT protein useful for eliciting immune response in animal.
XX
PS Disclosure; Page 138; 139pp; English.
XX
CC The present invention describes a recombinant agfA gene (I) where a
CC segment of the gene has been replaced by a segment of a foreign DNA
CC sequence which encodes a foreign epitope or antigen. Also described are:
CC (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC assembly system of strains of Salmonella, Escherichia coli and
CC Enterobacteriaceae for the production of fimbriae comprising recombinant
CC AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC directing recombination of a recombinant gene into the chromosome of the

```
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 19-112; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene derived from
CC   Salmonella enteritidis 27655-3b. The nucleic acid can be used to provide
CC   diagnostic assays for Salmonella and/or enteropathogenic bacteria of the
CC   family Enterobacteria. It can also be used to provide proteins and
CC   antibodies which can be used for assays. The nucleic acid sequence can be
CC   used to provide probes or primers which can specifically hybridise to
CC   nucleic acid molecules from greater than 99% of Salmonella strains that
CC   are pathogenic to warm-blooded animals relative to nucleic acid molecules
CC   from virtually all other microbial organisms. (Updated on 25-MAR-2003 to
CC   correct PF field.)

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 134; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
```

```
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 137; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Recombinant agfA gene having a segment replaced by a foreign DNA sequence
PT   which encodes foreign epitope or antigen, expresses recombinant AgfA
PT   protein useful for eliciting immune response in animal.
XX
PS   Disclosure; Page 135; 139pp; English.
XX
CC   The present invention describes a recombinant agfA gene (I) where a
CC   segment of the gene has been replaced by a segment of a foreign DNA
CC   sequence which encodes a foreign epitope or antigen. Also described are:
CC   (1) use of thin aggregative fimbriae (SEF17/TAF) nucleation depended
CC   assembly system of strains of Salmonella, Escherichia coli and
CC   Enterobacteriaceae for the production of fimbriae comprising recombinant
CC   AgfA, CsgA and AgfA-homologue fimbrin subunits, respectively; (2)
CC   directing recombination of a recombinant gene into the chromosome of the
CC   homologous species; (3) directing recombination of a recombinant gene
CC   back into the chromosome of the homologous species, replacing the native
CC   copy of that gene; and (4) eliciting an immune response in an animal,
CC   comprising separating an amino acid polymer comprising a recombinant AgfA
CC   protein containing a replacement segment or segments of foreign amino
CC   acid sequence or sequences grown on a Salmonella, E. coli or
CC   Enterobacteriaceae host cell, from the host cell and introducing the
CC   polymer into the animal in conjunction with a carrier or diluent. (I) is
CC   useful for the expression of recombinant AgfA protein which is useful for
CC   eliciting an immune response in an animal. In a fimbrial presentation
CC   system the heterologous antigens are presented in high numbers (up to
CC   500,000 copies/cell), the hybrid fimbrin protein possesses both the
CC   immunogenicity and adhesion properties relevant for an efficient live
CC   vaccine, the carrier fimbrial subunit proteins are usually strong
CC   immunogens, which may be important for directing an immune response
CC   against the inserted epitope, and hybrid fimbriae are easy and
CC   inexpensive to purify in large amount. The present sequence is given in
CC   the exemplification of the present invention

PT   Eliciting an immune response to Salmonella - using attenuated Salmonella
PT   strains, vector constructs, or compsns. contg. fimbrial type proteins.
XX
PS   Disclosure; Fig 7A; 95pp; English.
XX
CC   The DNA encodes the Salmonella enteritis27655-3b TnphoA mutant strain
CC   agfA gene cloned into pUC19. The DNA and isolated proteins are used in
CC   genetic immunization and vaccine compositions, respectively, to elicit an
CC   immune response to Salmonella in animals (e.g. food producing animals)
CC   and humans. (Updated on 25-MAR-2003 to correct PN field.) (Updated on 27-
CC   AUG-2003 to correct OS field.)

PT   Isolated Salmonella gene agfA - used for diagnosis of Salmonella or
PT   enteropathogenic bacteria of the Enterobacteria family.
XX
PS   Claim 1; Col 107-110; 85pp; English.
XX
CC   The present sequence represents an isolated agfA gene fragment derived
CC   from Salmonella enteritidis 27655-3b TnphoA mutant strain. The nucleic
CC   acid can be used to provide diagnostic assays for Salmonella and/or
CC   enteropathogenic bacteria of the family Enterobacteria. It can also be
CC   used to provide proteins and antibodies which can be used for assays. The
CC   nucleic acid sequence can be used to provide probes or primers which can
CC   specifically hybridise to nucleic acid molecules from greater than 99% of
CC   Salmonella strains that are pathogenic to warm-blooded animals relative
CC   to nucleic acid molecules from virtually all other microbial organisms.
CC   (Updated on 25-MAR-2003 to correct PF field.)

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

/note="Vector: PWD42nv; Purified genomic DNA from M. musculus C57BL/6J (male) was obtained from the Jackson Laboratory Mouse DNA Resource (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

                     Project of Genome Exploration Research Group in Riken
```

Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 185.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC 3']. cDNA was cloned into the XhoI and BamHI sites. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. Cloning sites, 5' end: SalI; 3' end: BamHI"

WARNING: There is evidence that suggests that the 384-well parent plate of this clone contains both human and mouse derived clones. Thus, the origin of this clone is uncertain. This caution should be kept in mind should you use this clone.

This clone is available royalty-free through LLNL ; contact the IMAGE Consortium (info@image.llnl.gov) for further information.
Seq primer: -28M13 rev2 from Amersham.

KEYWORDS    csgA gene; curli organelle; fibronectin-binding protein.
SOURCE      Escherichia coli
  ORGANISM  Escherichia coli
            Bacteria; Proteobacteria; Gammaproteobacteria; Enterobacteriales;
            Enterobacteriaceae; Escherichia.
REFERENCE   1  (bases 1 to 648)
  AUTHORS   Olsen,A., Arnqvist,A., Hammar,M., Sukupolvi,S. and Normark,S.
  TITLE     The RpoS sigma factor relieves H-NS-mediated transcriptional
            repression of csgA, the subunit gene of fibronectin-binding curli
            in Escherichia coli
  JOURNAL   Mol. Microbiol. 7 (4), 523-536 (1993)

  TITLE     Direct Submission
  JOURNAL   Submitted (13-OCT-1998) Laboratory of Genetics, University of
            Wisconsin, 445 Henry Mall, Madison, WI 53706, USA
COMMENT     This sequence was determined by the E. coli Genome Project at the
            University of Wisconsin-Madison (Frederick R. Blattner, director).
            Supported by NIH grants HG00301 and HG01428 (from the Human Genome
            Project and NCHGR). The entire sequence was independently
            determined from E. coli K12 strain MG1655. Predicted open reading
            frames were determined using GeneMark software, kindly supplied by
            Mark Borodovsky, Georgia Institute of Technology, Atlanta, GA,
            30332 [e-mail: mark@amber.gatech.edu]. Open reading frames that
            have been correlated with genetic loci are being annotated with CG
            Site Nos., unique ID nos. for the genes in the E. coli Genetic
            Stock Center (CGSC) database at Yale University, kindly supplied by
            Mary Berlyn. A public version of the database is accessible
            (http://cgsc.biology.yale.edu). Annotation of the genome is an
            ongoing task whose goal is to make the genome sequence more useful
            by correlating it with other data. Comments to the authors are
            appreciated. Updated information will be available at the E. coli
            Genome Project's World Wide Web site
            (http://www.genetics.wisc.edu). *** The E. coli K12 sequence and
            its annotations are periodically updated; this is version M54. No
            sequence changes. Annotation updates: updated gene identifications
            and products; all new functional assignments courtesy of Monica
            Riley; added promoters, protein binding sites, and repeated
            sequences described in reference 1. The unique numeric identifiers
            beginning with a lowercase 'b' assigned to each gene (protein- or
            RNA-encoding) are now designated as gene synonyms instead of
            labels. This should allow them to be searched for in Entrez as gene
            names.
